MRP PORTAL · PRODUCT OWNER QUICK GUIDE

From forecast to material plan

Upload the approved files in order, run MRP, then review the suggested material needs.

CSV uploads only · Excel workbooks are not accepted

1 Upload the planning files

Choose the matching Upload type. Upload one file, wait for the success message, then continue.

MASTER DATA · MASTER DATA SCREEN

1. **plant_master.csv** — Sites and country · load first
2. **material_master.csv** — Names, units, scrap, lead time, MOQ, safety stock
3. **fg_master.csv** — Products assigned to plants
4. **plant_constraints.csv** — Approved plant-level stock and order rules
5. **bom_input.csv** — Materials and quantity used per product
6. **inventory_input.csv** — Inventory screen · on hand and incoming stock
7. **demand_input.csv** — Demand Planning screen · weekly product forecast

Reconciliation only
Monthly source and allocation detail files are not uploaded.

2 Run the material plan

OPEN → **Dashboard** — Choose country and plants

SET → **Dates & buckets** — Match the uploaded forecast

CALCULATE → **Run MRP**

REVIEW → **Material Requirement** — Open saved result rows

Training example settings: Morocco · 1 Nov 2026 · Weekly · 3-month horizon. For other plans, use approved dates and scope.

3 Check that the result makes sense

UPLOADS
Success message per file
Check row counts; fix any error before running.

MRP RUN
Completion message + results
Confirm selected plants and periods appear.

RESULTS
Review material, units, quantities
Check shortages, MOQ orders, release dates, alerts.

No material results?
Check the date range, plant/product codes, and that every forecasted product has a BOM.

WHAT THE CALCULATION DOES

Gross need = forecast × BOM usage × (1 + scrap)

Net need = max(0, gross need + safety stock − opening stock − scheduled receipts)

Suggested order is at least MOQ; lead time moves its release earlier. Review before purchase.

DATA NOTE

The attached Excel workbook cannot be uploaded directly. Example CSVs are training data; some site mappings and planning values are synthetic.

Use the latest approved CSVs and confirm units, codes, forecast period, and business rules before sharing a plan.
